ca953a0120d891083f939673078ef1a989dae18a

Academy of Engineering

LUMUMBA

RUDN University

educational division (faculty/institute/academy) as higher education programme developer

COURSE SYLLABUS

BIM-Technology in Construction Management

course title

Recommended by the Didactic Council for the Education Field of: 08.04.01 Civil Engineering

field of studies / speciality code and title

The course instruction is implemented within the professional education programme of higher education:

Civil Engineering and Built Environment

higher education programme profile/specialisation title

1. COURSE GOAL(s)

The goal of the course <u>BIM-Technology in Construction Management</u> is the formation of students' understanding of BIM-technology and familiarization with the principles of using this technology in the organization and management of construction.

Objectives of the course:

- study of the basic principles of BIM technology;

- obtaining by students of theoretical knowledge and practical skills necessary for the use of BIM technology in the organization and management of construction;

- obtaining practical skills necessary to build 4D and 5D models of elements of construction projects.

2. REQUIREMENTS FOR LEARNING OUTCOMES

The course <u>BIM-Technology in Construction Management</u> implementation is aimed at the development of the following competences (competences in part):

Table 2.1. List of competences that students acquire during the course <u>«BIM-Technology</u> <i>in Construction Management»

| Compet ence code | Competence descriptor | Competence formation indicators (within this course) |
|------------------------|--|---|
| GC-2 | Able to manage the project at all stages of its life cycle | GC-2.1 Formulates the goals and objectives of the project, determines the expected results |
| GC-7 | Able: to search for the neces-sary sources of information and data, perceive, analyze, remember and transmit information using digital means, as well as using algorithms when working with data received from various sources to effectively use the information to solve problems ; to assess information, its reliability, to build logical conclusions on the basis of incoming information and data | GC-7.1 Searches for relevant sources of information and data, perceives, analyzes, remembers and transmits information using digital tools and algorithms when working with data from various sources in order to effectively use the information to solve problems; GC-7.2 Evaluates information, its reliability, builds logical conclusions on the basis of incoming information and data |
| GPC-3 | Able to set and solve scientific and technical problems in the field of construction, construction industry and housing and communal services on the basis of knowledge of industry problems and experience in their solution | GPC-3.2 Able to set and solve scientific and technical tasks in the field of technology, organization, management of construction and operation of capital construction projects |
| GPC-4 | Able to use and develop project and administrative documentation, as well as participate in the development of normative legal acts in the field of construction and housing and communal services | GPC-4.1 Able to use and develop project documentation; GPC-4.2 Able to use and develop administrative documentation; GPC-4.3 Able to use normative legal acts in the field of construction industry and housing and communal services, as well as to participate in their development |
| GPC-5 | Able to conduct and organize design and survey work in the field of construction, housing and | GPC-5.1 Able to conduct and organize survey work in the field of construction and housing and communal services; |

| | communal services, carry out | GPC-5.2 Capable of conducting and organizing |
|-------|-------------------------------------|--|
| | technical expertise of projects and | technical expertise of projects and author's supervision |
| | designer's supervision of their | of their observance |
| | compliance | |
| GPC-7 | Able to manage an organization | GPC-7.1 Capable of planning and organizing work in |
| | operating in the construction | the field of design, construction, operation of capital |
| | industry and housing and | construction projects: |
| | communal services, to organize | GPC-7.2 Has knowledge in the field of operational |
| | and optimize its production | management, management of works in the field of |
| | activities | design, construction, operation of capital construction |
| | | objects. |
| | | GPC-7.3 Canable of controlling and accepting work in |
| | | the design construction and operation of capital |
| | | construction projects: |
| | | GPC_{-7} 5 Able to develop measures to improve the |
| | | officiency of work in the design construction |
| | | energies of work in the design, construction, |
| | | |
| PC-3 | Organizational, technical and | PC-3.1 Able to carry out scheduling of construction |
| | technological preparation of | WORKS; |
| | construction production | PC-3.2 Knows how to choose the required material, |
| | | labor resources and construction equipment for the |
| | | production of works; |
| | | PC-3.3 Knows how to choose suitable techniques, |
| | | methods of work; |
| | | PC-3.4 Able to plan control over the production of |
| | | construction works, including compliance with safety |
| | | during the production of works; |
| | | PC-3.5 Able to develop organizational and |
| | | technological documentation |
| PC-5 | Organization of construction | PC-5.1 Knows how to determine the required resources |
| | works at the capital construction | to perform the work; |
| | facility | PC-5.2 Able to carry out scheduling of works; |
| | | PC-5.3 Able to identify and take into account |
| | | regulatory, legislative requirements, project |
| | | requirements and organizational and technological |
| | | documentation for the production of construction |
| | | works; |
| | | PC-5.4 Capable of performing operational |
| | | management, monitoring the progress of work; |
| | | PC-5.5 Able to carry out technical control, supervision. |
| | | acceptance of construction works |

3. COURSE IN HIGHER EDUCATION PROGRAMME STRUCTURE

The course <u>BIM-Technology in Construction Management</u> refers to the *core component* of (B1) block of the higher educational programme curriculum.

Within the higher education programme students also master other disciplines (modules) and / or internships that contribute to the achievement of the expected learning outcomes as results of the course <u>BIM-Technology in Construction Management</u>.

| Comp etence code | Competence descriptor | Previous courses / modules, internships | Subsequent courses / modules, internships |
|------------------------|--|--|---|
| GC-2 | Able to manage the project at all stages of its life cycle | Problem solving tecniques in Civil Engineering; Project management | Independent Research Work |
| GC-7 | Able: to search for the neces-sary sources of information and data, perceive, analyze, remember and transmit information using digital means, as well as using algorithms when working with data received from various sources to effectively use the information to solve problems ; to assess information, its reliability, to build logical conclusions on the basis of incoming information and data | Problem solving tecniques in Civil Engineering; Digital technologies in construction; Geoinformation Systems and Applications | Introductory Practice; Independent Research Work |
| GPC-3 | Able to set and solve scientific and technical problems in the field of construction, construction industry and housing and communal services on the basis of knowledge of industry problems and experience in their solution | Mathematical Modelling; Digital technologies in construction; Project management | Desin Practice; Technological Practice; Independent Research Work |
| GPC-4 | Able to use and develop project and administrative documentation, as well as participate in the development of normative legal acts in the field of construction and housing and communal services | Digital technologies in construction; Project management | Desin Practice; Technological Practice |
| GPC-5 | Able to conduct and organize design and survey work in the field | Digital technologies in construction; Project management | Desin Practice; Technological Practice |

Table 3.1. The list of the higher education programme components that contribute to the achievement of the expected learning outcomes as the internship results.

| | of construction, housing and communal services, carry out technical expertise of projects and designer's supervision of their compliance | | |
|-------|--|--|--|
| GPC-7 | Able to manage an organization operating in the construction industry and housing and communal services, to organize and optimize its production activities | Problem solving tecniques in Civil Engineering; Project management | Desin Practice; Technological Practice |
| PC-3 | Organizational, technical and technological preparation of construction production | Project management; Modelling of Construction Processes | Technological Practice; Pre-Graduation Practice |
| PC-5 | Organization of construction works at the capital construction facility | Project management; Modelling of Construction Processes | Technological Practice; Pre-Graduation Practice |

4. COURSE WORKLOAD

The total workload of the course <u>BIM-Technology in Construction Management</u> is <u>3</u> credits. *Table 4.1. Academic activities types by periods of the higher education programme*

| Type of academic | | Total | Semester(s) | | | |
|------------------------|---------|-------------------|-------------|--|--|--|
| activities | | academic hours | 3 | | | |
| Contact academic hours | | 54 | 54 | | | |
| including: | | | | | | |
| Lectures (LC) | | 18 | 18 | | | |
| Lab works (LW |) | 36 | 36 | | | |
| Seminars (workshops / | | 0 | 0 | | | |
| tutorials) (S) | | | | | | |
| Self-studies | | 27 | 27 | | | |
| academic hours | | | | | | |
| Evaluation and | | 27 | 27 | | | |
| assessment academic | | | | | | |
| hours | | | | | | |
| Course work / project, | | | | | | |
| credits | | | | | | |
| Course | academi | 108 | 108 | | | |
| workload | c hours | | | | | |
| | credits | 3 | 3 | | | |

5. COURSE CONTENTS

| Modules | Contents (topics) | Academic activities types * |
|--------------------------|--|-----------------------------------|
| Section 1. | BIM concept. Project implementation methods and | LC, LW |
| Basic concepts | BIM implementation. Levels of Development | |
| | (LOD). | |
| Section 2. | Systems and a systematic approach in the | LC, LW |
| Cloud-BIM for | management of a construction enterprise. | |
| design/construction | Synergetic of the system. Efficiency of synergetic | |
| coordination and | management of a construction enterprise. | |
| collision detection | | |
| Section 3. | Construction planning. Location Modeling | LC, LW |
| Construction planning | Elements for Task Planning. Modeling 4D. | |
| and 4D modeling | | |
| Section 4. | Types of estimates. Conceptual estimate. detailed | LC, LW |
| Calculation of the scope | cost estimate. Calculation based on 5D models. | |
| of work and cost | | |
| estimates 5D | | |

* - to be filled in only for full -time training: LC - lectures; LW - lab work; S - seminars.

6. CLASSROOM EQUIPMENT AND TECHNOLOGY SUPPORT REQUIREMENTS

Table 6.1. Classroom equipment and technology support requirements

| Type of | Classroom equipment | Specialized educational / |
|---------------|---|-----------------------------|
| academic | | laboratory equipment, |
| activities | | course study (if necessary) |
| | | |
| Lectures | An auditorium for conducting lectures, | |
| | equipped with a set of specialized furniture; | |
| | a blackboard (screen) and technical means | |
| | for multi-media presentations. | |
| Lab works | An auditorium for laboratory work, | Computer laboratory |
| | equipped with a set of specialized furniture | |
| | and equipment. | |
| Computer Labs | A classroom for conducting classes, group | Software: |
| | and individual consultations, current and | Autodesk Revit |
| | mid-term assessment, equipped with | Autodesk Navisworks |
| | | |
| | personal computers (in the amount of 14 | |

7. RESOURCES RECOMMENDED FOR INTERNSHIP

Main readings:

1. "BIM and Construction Management: Proven Tools, Methods, and Workflows", Brad Hardin, Dave McCool, John Wiley & Sons,2023.

2. BIM Handbook: A Guide to Building Information Modeling for Owners, Managers, Designers, Engineers and Contractors, Chuck Eastman, Paul Teicholz, Rafael Sacks, Kathleen Liston, Wiley, 2016.

3. Building Information Modeling: Planning and Managing Construction Projects with 4D CAD and Simulations, McGraw Hill Professional, Kymmell, Willem, 2018. *Additional readings:*

1. Talapov, VV BIM technology: the essence and features of the implementation of information modeling of buildings / VV Talapov. Moscow: DMK-Press, 2016.- 410 p. *Internet sources:*

1. Electronic libraries (EL) of RUDN University and other institutions, to which university students have access on the basis of concluded agreements:

- RUDN Electronic Library System (RUDN ELS) <u>http://lib.rudn.ru/MegaPro/Web</u>

- EL "University Library Online" <u>http://www.biblioclub.ru</u>
- EL "Yurayt" <u>http://www.biblio-online.ru</u>
- EL "Student Consultant" <u>www.studentlibrary.ru</u>
- EL "Lan" http://e.lanbook.com/
- EL "Trinity Bridge"
- 2. Databases and search engines:
 - electronic foundation of legal and normative-technical documentation http://docs.cntd.ru/
 - Yandex search engine https://www.yandex.ru/
 - Google search engine <u>https://www.google.ru/</u>
 - Scopus abstract database http://www.elsevierscience.ru/products/scopus/

The training toolkit and guidelines for a student:

1. Collection of lectures on the course <u>BIM-Technology in Construction Management</u>.

* The training toolkit and guidelines for the course are placed on the internship page in the university telecommunication training and information system under the set procedure..

8. ASSESSMENT TOOLKIT AND GRADING SYSTEM* FOR EVALUATION OF STUDENTS' COMPETENCES LEVEL AS INTERNSHIP RESULTS

The assessment toolkit and the grading system* to evaluate the level of competences (competences in part) formation as the course <u>BIM-Technology in Construction Management</u> results are specified in the Appendix to the internship syllabus.

* The assessment toolkit and the grading system are formed on the basis of the requirements of the relevant local normative act of RUDN University (regulations / order).
